With multiple locations, people and entities executing shipments, you need control and visibility across your network.

The Rockfarm Control Tower gives you the ability to manage inbound and outbound shipments with centralized command and control across all your shipping locations and those of your suppliers.

Increased visibility to all your shipping locations, results in better inventory control and planning. It also provides more opportunities for shipment optimization and management of performance metrics.

---

**Control Tower**

Through Control Tower automation, you have access to customized reporting and dashboards to monitor performance real time and over the long term. It also minimizes steps through the end-to-end process and increases financial accuracy and cash flow.

- Carrier Contract Management
